
Tiling problems in Extremal Graph Theory

A Data Management Plan created using DMPonline

Creator: Joseph Hyde

Affiliation: University of Birmingham

Template: Engineering and Physical Sciences Research Council (EPSRC)

Project abstract:

The aim of the project is prove degree sequence versions of existing cornerstone tiling results in extremal graph theory. The main two results we will be trying to produce degree sequence versions of are Komlós theorem on almost-perfect H-tilings and Kühn and Osthus' theorem on the minimum degree which forces a perfect H-tiling.
