
Reactions of Vietnamese public Universities to the autonomy policy

A Data Management Plan created using DMPonline

Creator: Hoang Dang Nguyen

Affiliation: University of Manchester

Template: None

Project abstract:

This project is to examine how and why Vietnamese public Universities react to the autonomy policy. This is a qualitative study. The data is gathered through document analysis and semi-structured interviews.

Last modified: 22-04-2019

The above plan creator(s) have agreed that others may use as much of the text of this plan as they would like in their own plans, and customise it as necessary. You do not need to credit the creator(s) as the source of the language used, but using any of the plan's text does not imply that the creator(s) endorse, or have any relationship to, your project or proposal

Reactions of Vietnamese public Universities to the autonomy policy

Manchester Data Management Outline

- No
- Biotechnology and Biological Sciences Research Council

This PhD project will not be applied for funding from any source. I unticked the choice in the textbox above, but somehow the choice keeps coming back.

- Yes - only institution involved
- Re-use existing data (please list below)
- Acquire new data

New data: collected from semi-structured interviews

Existing data: documents from Universities (internal documents such as organisational structure, strategy, etc.)

- University of Manchester Research Data Storage Service (Isilon)

This data will be stored on the UM Research Data Storage space of my supervisor, Professor Maria Nedeva.

- < 1 TB
- Not applicable
- < 5 years

I will not use the data after this study.

- Personal information
- Audio and/or video recordings

I will need to collect data from multiple positions within three Universities. The information to be processed will include the personal identifiable information, such as the position title, responsibilities, departments, roles, and terms. As I intend to do the recording, the voice in the recordings is also a personal identifiable information. This information will be anonymised at the analysis stage, however. The data files will not contain any personal identifiable information. Instead, a metadata file will be created - this file contains the linkage between the data explored with the person who provides the data. This metadata file will be saved with a password, and will be kept in the P drive.

The data will be kept on RDS only. File names will be coded, the code table will be kept in a separated file. The voices in the recordings will be altered.

- No

The personal information will be removed once the project complete.

- No
- Not applicable

I will not share personal information.

- No

My primary supervisor, Prof. Maria Nedeva

Project details

This research project is to examine how Vietnamese public Universities reacts to the autonomy policy, and why are these reactions used.

There are several policies to be followed in my thesis, as follow:

1. The University of Manchester Research Data Management Policy
<http://documents.manchester.ac.uk/DocuInfo.aspx?DocID=33802%20>
2. The University of Manchester Records Management Policy
<http://documents.manchester.ac.uk/display.aspx?DocID=14916>
3. The University of Manchester Data Protection Policy
<http://documents.manchester.ac.uk/display.aspx?DocID=14914>
4. The University of Manchester Publications Policy
<http://documents.manchester.ac.uk/display.aspx?DocID=28526>
5. The University of Manchester Intellectual Property Policy
<http://documents.manchester.ac.uk/display.aspx?DocID=24420>
6. The University of Manchester IT policies and guidelines
<http://www.itservices.manchester.ac.uk/aboutus/policy/>
7. Taking recordings of participants for research projects <http://documents.manchester.ac.uk/display.aspx?DocID=38446>

Responsibilities and Resources

The data management person is my primary supervisor, Prof. Maria Nedeva.

My primary supervisor, Prof. Maria Nedeva, has agreed to let me use her University of Manchester's Research Data Storage (RDS) share.

Data Collection

Documents: I intend to collect the documents which describe the organisational structure, tasks and roles of key positions, the process of appointing key positions, human resource and financial policies, teaching and research policies, and key processes and procedures of the selected Universities. These documents are likely to be hardcopy. I will take their photos and turn them into softcopies.

These documents can be taken by asking for permission from the rector, and then I will need to go to respective departments / positions who have these documents. There may be sensitive data in these documents, such as the current strategy of the University. I will most likely be provided with these sensitive documents after agreed to only use these documents for the purpose of this study, and not to provide the documents or their content to anyone outside of the research team. The agreement may be in verbal or written form.

Interviews: I intend to interview the top managers, deans, and academics. Approximately 48 participants will be needed. The number is only estimated, base on the actual organizational structures of Vietnamese public Universities and the research questions of this study. Following the research questions, for each University, the following positions are sought after for interview:

- Rector: 1
- Vice rector: 2
- Secretary of the Communist party's committee: 1
- Members of the University's council: 2
- Deans: 3
- Academics: 6
- A representative of the external governance body of the University: 1

In total, there are 16 interviews for each University. However, since the rector can also be the secretary, and there are Universities without University's councils, the actual interviews can be less than 16. In addition, it is anticipated that the representative of the external governance body will be difficult to approach.

The interview's transcript will then be saved in Microsoft Word's docx format.

The data will be collected following these steps:

1. I will use my personal relationship with my University (Hanoi University) to gain data in my University. As of current, I am an employee of Hanoi University, and also a PhD student in the University of Manchester.
2. I will obtain the letter of introduction of my supervisors, of my University, and my personal relationship to gain data in the other two Universities.
3. I will approach the Universities by both top-down and bottom-up approaches. The top-down approach means I will first approach the rectors and ask for their support in written form, and then work it down the chain of command within these Universities. Simultaneously, I will also look for data collection opportunities through personal relationship. This is necessary because not only certain people may not want to share data with me, but some also may not tell me what they really think and/or know, or not tell me the whole story. As a result, by asking someone who know and trust me, I have a better chance to collect the proper data in full.

The sampling method is purposive and convenient. Following this method, I intend to use the key informant sampling, i.e. to gain access to those who are most likely to understand the topic at hands. In addition, since Vietnamese are generally not opened to research, I intend to approach those who are most accessible.

For Hanoi University, where I am currently an employee, I have a good relationship with the rector as well as the dean of my faculty. Both of them were my teachers when I was a student there. Therefore, I think I will be able to obtain supports from them. As of current, for the other Universities, I can only be certain of using the top-down approach. I will need to ask for connections from my colleagues for these Universities so that the bottom-up approach can also be used.

The data collected will be digitalized into files if it is not one. The files are to be put into folders, as follow:

- All file and folder names contain only characters in the alphabet, the number, and the underscore (_) symbols. This convention is to ensure the maximization of understandability and compatibility.
- Each University has its own folder.
- In each University folder, the original data will be kept in a separate subfolder.
- The original data files (i.e. the recording files) will be named as follow: date of collection_position. If there are multiple records for a single position (because of, for example, interruptions or multiple interviews), the number 01, 02, 03, etc. will be added to the end of the file name.
- The extracted data (i.e. the transcript) will be kept in a separate folder, with the naming convention akin to that of the original data files.
- The interview questions will evolve following new data and better interviewing skills. All version of the interview questions will be kept in a separated folder.
- Change to original data, if any, will be recorded. The changes can be from misunderstanding, the correction of estimation data, or the availability of newer data.

For the interview, the following quality assurance activities are to be followed:

- Explicit consent must be obtained from the interviewee for the recording and taking notes.
- It is anticipated that some interviewees will not want to be recorded. Some probably will not want to be noted. These limitations may reduced the quality of the data collected due to imperfect .
- Interview schedule will always be kept online by google schedule.
- If possible, the documents will be analysed before the interview in order to maximize the quality of the interview.
- The interview will be recorded by using an encrypted recording device. After the recording is done, it will be uploaded as soon as possible to the University's RDS. After testing to make sure that the files on RDS are good, the files on the recording device will be deleted.

Documentation and Metadata

A separate file name readme.txt will be provided. In this file, the conventions of file names, dates, descriptors of the data, file format, data origin, and access conditions are provided.

In order to clarify the meaning of the data and data collection methods, the documentation will be extensive. It will include the research context and design, the data collection methods used, and definitions of variables.

In addition, some documentation will be updated along with the new data collected, such as data preparations and manipulations and summaries of findings based on the data, and definitions of variables.

Ethics and Legal Compliance

Several ethical issues are identified, as follow:

Anonymisation of personal data: the pseudonymisation will be used, as the data is expected to be used in future studies. However, the interviewee will explicitly and formally clarify if they want their information to be fully anonymised or pseudonymised. The formal consent agreements is to be obtained verbally from the interviewees.

There are ethical concerns regarding this study due to the use of interview, and the location of data collection being in Vietnam. The ethical issues are as follow:

- To clearly explain to participants how their data will be used and (if applicable) shared
- To only perform interviews, taking notes, and recordings with the explicit consent of the interviewees.
- To protect the confidentiality of participants by using pseudonymisation.
- To ensure the safety of data recording, transferring and storage.

I have discussed with my supervisors. I will have the copyright, however, I intend to have my research publicly available to all for free.

Storage and backup

The data will be backed up by the University servers. Specifically, I intend to use the University of Manchester's Research Data Storage (RDS) of Prof. Maria Nedeva, my primary supervisor.

I will share my data with my supervisor, as I intend to use her RDS share.

In order to ensure the security of the data, the following considerations are taken:

- Physical security of the recording device
- Encryption of files (including audio recordings and transcripts), media and devices as appropriate
- Storing person identifying information separately and securely from data relating to research participants e.g. to store the pseudonymisation key on my P drive.
- Secure transfer of data from the recording device to the University's Research Data Storage (RDS) service as soon as possible to ensure that a master copy is backed up and the file is encrypted
- The recording device is not to be shared.

Selection and Preservation

All data is to be used for this study only. Therefore, it is not to be retained or preserved beyond the minimum requirement of the University of Manchester.

N/A

Data Sharing

My supervisors will need to have access to the data, and the University of Manchester also need to view the data for audit purposes.

Other than that, I will not share the data, as Vietnamese usually work on the basis of relationship. As a result, I think my participants are willing to talk to me, but are likely to not want their revealed information used by anyone else.
