Project abstract:

Does the source of foreign aid affect regime outcomes? In other words, does foreign aid from an autocratic donor undermine democracy in the recipient nation, and aid from a democratic donor strengthen democracies? This research attempts to test claims made on China being a “Rogue” Donor with respect to its foreign aid and investment strategies in Africa (Naim, 2007), by using data on Chinese foreign aid, democratic donor aid (OECD – USA) and other determinants of a democracy (as control variables) regressed on a democracy index over 2000-2014 to test the hypothesis. In particular, this research attempts to test if changes in democracy levels in recipient nations have responded to changing donor aid.

Does foreign aid from an autocratic donor undermine democracy in the recipient nation, and aid from a democratic donor strengthen democracies? In particular, this research attempts to test if changes in democracy levels in recipient nations have responded to changing donor aid through a quantitative regression analysis.
